

ALPHABOOTH ASSEMBLY INSTRUCTIONS

X BOOTH

The standard X booth position for storage and transport is upright, on its wheels.

Set Up

Release the Velcro strap and spread the panels out to form a cross.

Position the two chrome struts in the straight, locked position

Extend the long arm and position the center on the stub, while clamping the end to the catch.

The X booth is now locked into position

Leaving plenty of room, lower the booth until it is lying on its side. Raise the booth to its working position.

The writing shelves are held up by magnets. Gently pull each shelf down and engage the sliding tab into the slot. Tighten

If necessary, use the adjusters at the bottom of each leg to level the X booth.

The X booth is now ready for use.
